Integrating Remind with Canvas LMS
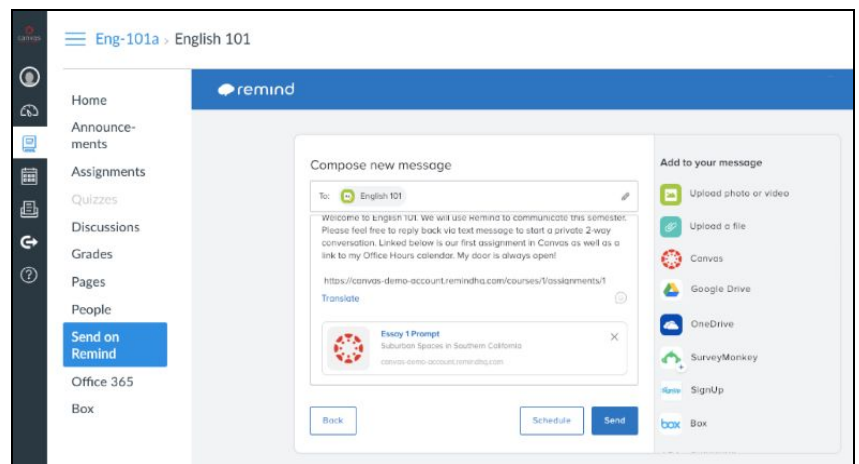

Leading schools using Canvas as their LMS recognize the need for integrations that drive productivity and improve student engagement. With Remind's LMS integrations, a premium feature of the Remind plan, you can integrate Canvas with Remind to make content sharing easier—while maximizing your technology investments.

Encourage two-way communication with students

Remind provides two-way communication with notification options that include text messages, smartphone app notifications, and emails. For easy access, each message contains a direct link back to Canvas—keeping students involved and informed.

Save instructors time and effort

Eliminate the clutter and confusion of multiple inboxes and communication channels. Remind's integration allows instructors to quickly send links to Canvas assignments along with over 20 connected applications, including Signup.com, Box, Google Drive, and Microsoft OneDrive—without ever leaving Canvas.

Support learning beyond the classroom

Drive student engagement by attaching assignments and resources directly to messages from the Remind composer or through Canvas. For students on the go who don't always log into Canvas, this allows you to send important resources and information that they can't miss.

With over 31 million users, Remind is the proven way to engage with your students—and enhance their campus experience. Remind has been certified by iKeepSafe for FERPA compliance. Personal contact information remains private and is not shared without user permission.
